

Swift Workstation System

 Technology in motion

3 WAY

3 way and 4 way configurations are the standard layout structures in today's modern office layout. These structures can be easily added to, providing flexibility when changes to space utilisation are required. Pinnable, and acoustic screen partitions are available in multiple heights depending on the users' need for privacy, sound control or storage solutions.

4 WAY

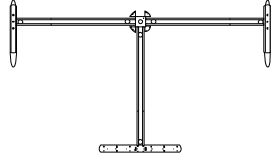

BOARDROOM
TABLE

PERSPEX screens add colour and minimalism, creating private space without losing the openness created by this structure.

T STAND

Swift

Bench

THE Swift bench configuration maximises floor space while allowing for optimal use of workspace. The Swift frame construction allows the user to grow the structure when required.

Bench widths and lengths can vary depending on a client's requirement. The use of screening in glass, fabric or perspex creates individual space, sound control and storage solutions.

Under-desk storage units in Melamine or steel provide immediate access to files.
